

## The Stages of the Creative Problem Solving (CPS) Process

| Stage  | Purpose   | How to Diverge   | How to Converge  |
|--|---|--|--|
| <b>Stage 1:<br/>Objective Finding (OF)</b><br><br>    | To find a goal, wish or challenge upon which you might want to apply the Creative Problem Solving process.  | List your goals, wishes, or challenges. Make a long list of wishes even if you already know your general area of interest. The list takes the form of "I wish..." "It would be great if...."<br><br><u>Questions:</u> What do you wish for? What opportunities are there? What are your dreams?                  | The Problem Owner chooses on goal, wish, or challenge that feels right to him or her:<br><br>This becomes the starting point for Fact Finding.<br><br>Check the chosen objective for ownership, motivation, and imagination.   |
| <b>Stage 2:<br/>Fact Finding (FF)</b><br><br>         | To list all the data, facts, questions and feelings that will give you a clear picture of the situation as it exists now.   | Make a long list of facts about the situation.<br><u>Questions:</u> Who is involved? What is happening? When is it happening? Where is it happening? Why is it happening? What have you tried? What don't you know? What are your opinions?  | The Problem Owner highlights all the facts that seem important or interesting.<br><br>Use the facts as a starting point for Problem Finding.   |
| <b>Stage 3:<br/>Problem Finding (PF)</b><br><br>    | To redefine the problem in as many different ways as possible, and then to pick a specific statement that most clearly identifies the problem that you wish to solve.<br><br>A problem well defined is half solved. | Construct as many varied "In What Ways Might I/We..." or "How might..." or "How to..." statements as possible.<br><u>Hint:</u> Try using key facts (From fact Finding) or restatements from the Objective Finding list to lengthen your list.  | The Problem Owner selects a single specific IWWMW statement that, if answered successfully, would best address their goal, wish, or challenge.<br><br>You can combine more than one statement, or reword to improve the statement. Check the final Problem Statement with the Problem Owner for specificity, suitability, and potential. |
| <b>Stage 4:<br/>Idea Finding (IF)</b><br><br>       | To generate as many solution to the Problem Statement as possible.  | Brainstorm a list of ideas that answer the "IWWMW..." statement selected.<br><u>Hint:</u> Change perspective: How would a _____ view this problem? Simulate divergence by using SCAMPER, forced connections, analogies. GET WILD & CRAZY.  | The Problem Owner narrows the list down to ideas that are "intriguing" or "might work", even if he or she doesn't know exactly how yet.  |
| <b>Stage 5:<br/>Solution Finding (SF)</b><br><br>   | To identify the strengths and weaknesses of promising ideas and to decide which ones to use.  | Brainstorm criteria for judging ideas. What factors will determine whether or not an idea works for the Problem Owner?<br><br>Generate criteria by asking "The solution will work if it..." "Will it..." or "Does it..." <u>Be specific.</u> "Money" is not a criterion, but "Does it cost less than \$450?" is. | <ol style="list-style-type: none"> <li>1. The list of criteria is narrowed down by the Problem Owner to the most important criteria.</li> <li>2. The ideas from the Idea Finding Stage are run through the criteria. Solutions that work for the Problem Owner go to the next step.</li> </ol>   |
| <b>Stage 6:<br/>Acceptance Finding (AF)</b><br><br> | To develop an action plan for your solution by taking stock of resources, who/what will assist in, and who will object to implementing your idea.   | List all the things you need to do to get the idea accomplished.<br><br>Questions: Who will be involved? Who's approval do you need? What has to happen? Where does it happen? When are the deadlines? How will the ideas be implemented?  | <ol style="list-style-type: none"> <li>1. The Problem Owner narrows the list to the action steps necessary to get the solution implemented.</li> <li>2. The Problem Owner commits to dates and resources for completing the selected action steps.</li> </ol>  |

| Technique   | How   |
|---|---|
| <p><b>Inverse</b><br/>A problem statement that has the opposite meaning as the original problems statement (e.g., “How best to increase communications” and how best to decrease communications”).</p>  | <ul style="list-style-type: none"> <li>➤ Word a problem statement so that it has the opposite meaning.</li> <li>➤ Facilitate brainstorming around the inverse technique.</li> <li>➤ Reverse ideas toward the original problem statement.</li> </ul>   |
| <p><b>Forced Connections</b><br/>Involves connecting two or more apparently different ideas, concepts, or things which have been previously unrelated (e.g., a new car and an excellent marketing organization; an iceberg and an effective manager). Although seemingly unrelated items, if you think about a new car or an iceberg, you can find characteristics and qualities that might also relate to excellent marketing organizations and effective managers. Quantity is a must with this technique.</p>  | <ul style="list-style-type: none"> <li>➤ First, select something — an object, word, or a piece of music.</li> <li>➤ Focus on what makes it special; describe ten or more of its characteristics.</li> <li>➤ The facilitator then presents the problem statement.</li> <li>➤ The group then forces associations and connections between the descriptions and the problem. For example, the object is a pig, and its characteristics are “tastes good”, “fat”, and “dirty”. If the problem is to develop a new roof material, connections might include making it dirt repellent and keeping it thin to cut costs.</li> </ul>   |
| <p><b>Analogy</b><br/>Analogical thinking is the ability to borrow ideas from one context and use them in another, borrow a problem solution from a related problem, or otherwise “see a connection” between one situation and another. It involves using a statement with the same goal but different content as the problem statement (e.g., “increased productivity of a vegetable garden” used as an analogy for “increased productivity of customer service reps.”).</p>   | <ul style="list-style-type: none"> <li>➤ Lead group in developing an analogy for the problem statement. Consider analogies from world of sports, animal kingdom, plants, machines, geography, etc.</li> <li>➤ Brainstorm properties/characteristics for the analogous situation.</li> <li>➤ Translate ideas back to the original statement.</li> </ul>  |
| <p><b>SCAMPER</b><br/>Alex Osborn, a pioneer teacher of creativity, first identified the nine principle ways of improving divergent thinking. They were later arranged by Bob Eberle into an easy to remember acronym <b>SCAMPER</b>. SCAMPER can be a useful tool to generate diverse ideas.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>REMEMBER:</b><br/><b>Divergent Thinking: Generating lots of options by:</b></p> <ul style="list-style-type: none"> <li>➤ Deferring Judgment</li> <li>➤ Striving for Quantity</li> <li>➤ Seeking wild ideas</li> <li>➤ Combining and Building on ideas.</li> </ul> <p><b>Convergent Thinking: Judging options; making decisions by:</b></p> <ul style="list-style-type: none"> <li>➤ Judging affirmatively; “What I like about this is ...”</li> <li>➤ Being Deliberate</li> <li>➤ Examining, refining, revising and improving ideas</li> <li>➤ Checking your objectives; “It would be nice if ... a list of your criteria”</li> </ul> </div> | <ul style="list-style-type: none"> <li>➤ <b>Substitute</b> something.<br/>“What could I use instead?” or What other ingredients, materials, or components could I use</li> <li>➤ <b>Combine</b> it with something else.<br/>“How can I combine parts or ideas?” “Are there two things I could blend rather than coming up with something new?”</li> <li>➤ <b>Adapt</b> something to it.<br/>“What else is like this?” “Could we change or imitate something else?”</li> <li>➤ <b>Magnify</b> or add to it.<br/>“How could I make it bigger, stronger, more exaggerated, or more frequent?”</li> <li>➤ <b>Modify</b> it.<br/>“Could we change a current, idea, practice or product slightly and be successful?”</li> <li>➤ <b>Put</b> it to some other use.<br/>“How can I use this in a new way?”</li> <li>➤ <b>Eliminate</b> something.<br/>“What can be omitted or eliminated? Are all the parts necessary? Is it necessary to solve this problem at all?”</li> <li>➤ <b>Rearrange</b> it.<br/>“Could I use a different sequence? Could I interchange parts?”</li> <li>➤ <b>Reverse</b> it.<br/>“Could I do the opposite?” What would happen if I turned it upside down, backward, or inside out?” e.g. reversible winter coat</li> </ul> |
